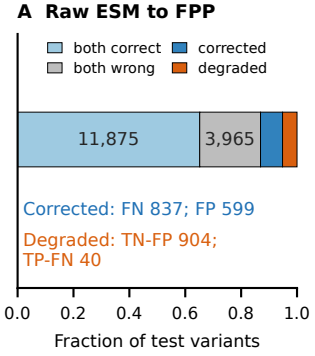
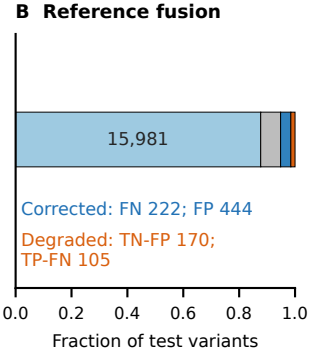
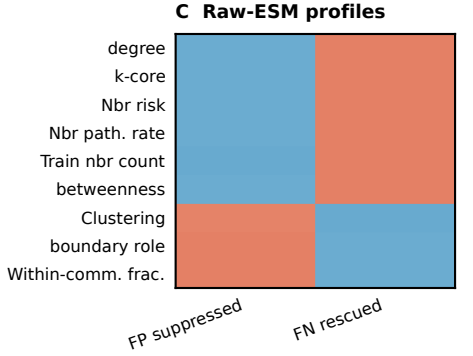
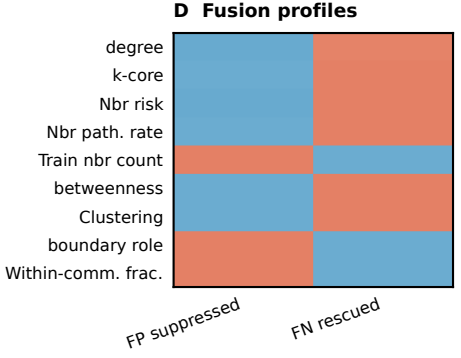
# Fixed propagation: exploratory prediction transitions at threshold 0.5



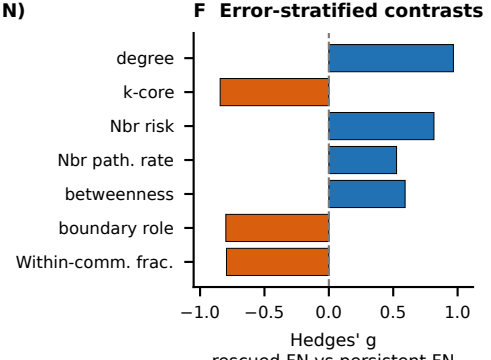






**E Mean differences (FP - FN)**

| | ESM to FPP | CADD+AM to graph fusion |
|---|---|---|
| degree | -1.11 | -0.266 |
| k-core | -0.287 | -0.0518 |
| Nbr risk | -1.12 | -0.973 |
| Nbr path. rate | -0.161 | -0.168 |
| Train nbr count | -3.32e+03 | +2.36e+03 |
| betweenness | -0.905 | -0.171 |
| Clustering | +0.0512 | -0.0368 |
| boundary role | +0.82 | +0.248 |
| Within-comm. frac. | +0.205 | +0.0882 |



C/D: blue = lower, orange = higher within-row mean (row-scaled).

E: raw FP-suppressed minus FN-rescued means; feature units differ. E/F are descriptive, without significance tests.
